

AUNTIE APPOINTMENT APP- RECORD YOUR MENSTRUAL LIFE

Project Description: This system function is written in Python and can record the physical condition related to menstrual life. It not only has history query and chart display, but also reminds the expected time of the next menstrual period, provides file storage and information about menstrual symptoms, precautions, etc. Through the form survey, the system function is increased to meet the needs of users and is closer to daily life.

“

Motivation: Every month, girls will have a lot of troubles due to menstruation, physical discomfort or sudden situations that they don't know how to solve, which leads to many situations. I want to increase women's education related to menstruation, but there is too much information on the Internet that cannot be distinguished, or it is difficult to quickly find the required information, causing more trouble.

Creative features: It mainly provides recording of menstrual time, as well as message reminders. At the same time, you can view a lot of information, increase knowledge of menstrual symptoms, relief methods and diet, and facilitate finding stores to buy sanitary products. You can make notes according to personal needs and save your own record files.
