

校哈哈 Goal AI Campus Integration System

1. Utilize **web scraping technology** to push real-time school notifications, helping students stay updated with the latest school developments.

校網搜尋系統

▲ Use the web scraping tool (Playwright) to extract information from the school website.

▲ Convert the school website information into semantic vectors using generative AI and store them in a database (Pinecone).

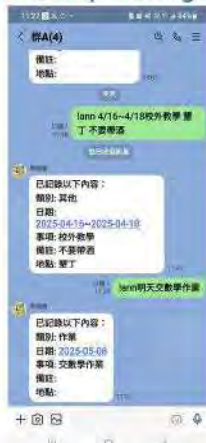

▲ Provide users with the ability to query school website information through the school website.

Goal

2. Leverage **LINE Bot** and **generative AI** to achieve automated integration of class group information.

Use LineBot to extract group messages, analyze the text with generative AI, automatically convert them into corresponding tasks, and integrate them into the website's notepad.

▼ Group messages (A)

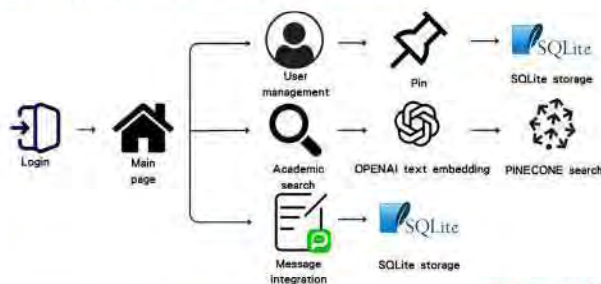

記事本

Goal

2. Obtain user data through **LINE login** to create a **relational database**, enabling personalized pinning and group message organization.

▲ Provide LINE account login.
