

Order Made Easy

Project Introduction: Guided by the principle of “subtraction design,” this project aims to create a streamlined and intuitive management tool that enables micro-sellers to easily track and manage their orders.

Research Motivation:

- Pain Point: Solving the operational difficulties faced by small-scale sellers on mainstream e-commerce platforms.
- Core Technology: Developing “Order Easy Access” with Tkinter, focusing on an intuitive, streamlined, and flat design.
- Product Positioning: Specifically designed for second-hand and blind box transactions, allowing management tools to return to the original concept of being simple and easy to use.

Project Features:

- Flat interface design
- Micro-transaction focused positioning
- Lightweight and efficient performance
