

Project Description

As consumer technology shifts toward high interactivity and entertainment, this project spearheads the digitalization of disc sports. By integrating AI, VR, and IoT technologies, our smart flying disc tracks real-time data—such as trajectory, speed, and spin—and syncs it directly to an app to maximize training results. With innovative business models and strategic media promotion, we aim to elevate the user experience, popularize Ultimate Frisbee, and inspire a whole new generation of players.
